

1206 Package SMD LED 0.5mm Height

Description

The major breakthrough in VS 55H8 is GREEN color emitted, package in dimension L x W x H, $3.2 \times 1.5 \times 0.5$ mm. The dice used in this series is AlGaInP material rather than the conventional GaP and GaAsP/GaP. The advantages of AlGaInP are low power consumption and obtaining high luminous intensity under low current driving condition. The Wavelengths and Luminous Intensities of this series are grouped under 20mA for uniformity. These LEDs are suitable for multiple usages in series connection applications.

Applications

- Industrial control systems signal indicator
- Automotive features
- Front panel indicator
- Status indication
