

## Infrared Receiver Modules 38KHz

### OS 11J7

#### Description

The OS 11J7 is a mini type of Infrared Receiver Module. Its self construction consists of a Pin Diode and Pre-amplifier assembled on the lead frame. The design of the lead frame is capable of reducing Electrical Field Disturbance and thus, the module itself is not affected by ambient light disturbance. The Voltage supply is ranging from 4.5V ~ 5.5V and is compatible with TTL and CMOS.

#### Applications

- Light detecting portion
- AV instruments
- CATV set top boxes
- Multi-media equipments
- Equipments with wireless remote control
